Edit

Hi team,

Can you please look into the disad_ddl.asat_dw_v_dim_vendor table for marketplace_id = 771770? I am only seeing null values for amgsf_account_id, but I know the vendor codes are assigned in Salesforce.

Example: sf account ID: 0018000001gyMP8AAM; Vendor Code: LEC4G

Query below

--

```
SELECT SNAPSHOT_DATE,  
VENDOR_CODE,  
AMGSF_ACCOUNT_ID  
FROM DISAD_DDL.ASAT_DW_V_DIM_VENDOR  
WHERE MARKETPLACE_ID = 771770  
AND SNAPSHOT_DATE = (SELECT MAX(SNAPSHOT_DATE) FROM  
DISAD_DDL.ASAT_DW_V_DIM_VENDOR)  
AND AMGSF_ACCOUNT_ID IS NOT NULL
```

Hey guys, is there an ETA to look into this?

Thanks!

Thanks, Sharath!

In the upstream Hercules job, the MX marketplace mapping was missing, hence the sf id was missing,

Now it is been added to MX and AU as well, should reflect from tomorrows data.

Resolving, feel free to reopen if needed.
